Bring your ERP functions to your mobile workforce on any mobile device.

What is the mobile workforce anyways? We are entering times right now, where more and more classical ERP functions you have usually executed on a fixed device have to be available in a mobile/cloud environment. It is not anymore only your classical sales field force. Why? Integrated Business processes and available IT technology enable you to become much more effective and achieve company goals much faster.

Our solution is build on the power of SAP Sybase (Sybase unwired platform/SUP and the Afaria management platform) and covers a multitude of business functions – from alerts pushed out of SAP ERP, to monitoring all the way to executing application functions in real-time. We have not only covered the functional aspect, but also the technical aspect – our apps are not developed for a specific device type and are therefore much more versatile.

Overview	Features	Benefits
Our main differentiator is our heritage – we come from business process optimization and have added technology on top of it. At the end the ultimate goal of any project is and always will be the improvement of business processes and provide the best tools to your team members. We are not a technology company trying to figure out what to do in your ERP system. Our mobile focus is currently Supply Chain, Warehouse Management and Manufacturing Business Process based. Your ideas are more than welcome.	**Project and Program Management:** Project Management tools get used throughout every deployment project. We follow an implementation method which we have refined over the last years, which provides operational and strategic KPIs at any moment of the deployment. **Analysis & Business Process Refinement:** Our experts sit together with you and determine the best route of business process refinement. **Integration Apps - Alerts:** We can push alerts and informational data to your mobile device pro-actively. **Integration Apps – Monitoring and Execution:** The mobile device becomes not only a monitoring and data gathering tool. It also provides essential functions to execute backend SAP ERP business processes. Typical applications are customer release management and shipping. **Sybase - SUP/Afaria** We embrace the power of Sybase unwired platform and the Afaria security and device management tool. **Continuous Improvement:** Bottom line: We are always there providing you with value add! We never stop improving our solution, therefore you can be certain, that you will be getting the latest and greatest from us. By doing so, you will never stop improving yourself.	Higher workforce productivity Increased win rates with mobile access to real-time customer data Faster, more informed decisions at the point of action Better, more responsive customer service Accelerated sales cycles More flexible, agile, and accurate forecasting
