

ACHIEVE EXCELLENCE  
CREATE VALUE

# AUTOMATION

How about giving your operational team 1 screen plus an RF-Scanner instead of 10 SAP Screens which have to be maintained manually? Sounds intriguing? We have it!

Our Automation solution is based on the principal of RF-enabling every materials handling transaction from:

- Supplier goods receipt – by container, Steel Coil, Pallet
- Inventory handling
- Packing
- Repacking
- Unpacking
- Cycle counting
- Warehouse management
- Manufacturing component assignment
- Manufacturing execution
- Line Side Scanning
- Scrapping
- Shipping scan-to-verify and scan-to-create

And therefore creating a complete cradle-to-grave traceability!

This solution is completely integrated in SAP ERP using

SAPConsole and uses all elements of Handling Unit Management, Batch Management, Production Orders, Repetitive Manufacturing, Packaging Instructions, Transfer Orders and different ways.

We print the required adobe barcode labels at the right time – internal or customer specific, your choice.

Our Automation Consulting is not based on an all-or-nothing approach.

#### **Value Stream:**

First, we analyze the business process you want to automate and come up with the best implementation model.

#### **Modular:**

The second step is the modular deployment of RF-Scanning transactions.

#### **Solution alignment:**
