Real-time Analytics, Dashboard and Visualization solution using SAP Business Objects

Our solution templates address the two big questions when it comes to analyzing data: How can I use all of my data in SAP

ERP and drive decisions from it? How can my transactional data drive dashboards, alerts and visualization for my operations? Both have to be answered to give management and your operations the right information in a visual and appealing way to make quick but also the right decisions.

Overview	Features	Benefits
<p>Data, small or big, become a decisive factor in every enterprise. But how can you use this data in the most productive way? Shop floor users need to have visualization tools, supervisors need Dashboards, management requires scorecards and analytical tools. We address the above with pmcControl – a modular analytics and dashboarding solution built on the powerful SAP Business Objects platform.</p>	<p>Project and Program Management: Project Management tools get used throughout every deployment project.</p> <p>Analysis: What are your KPIs, dashboard requirements? How does the data have to be presented? What authorization concepts need to be taken into account? These are all important questions and will be answered during our analysis. This phase is very important - this analysis is conducted across departments with one goal: “determine the single truth!”</p> <p>Integration Data Universes: We have built various integration scenarios and data universes already. These are templates and can be adjusted based on your specific business requirements.</p> <p>BI Analytics: These are dashboards analyzing data either from SAP ERP or other enterprise databases.</p> <p>Dashboard & Visualization Monitoring: The paperless factory is starting to become reality – one part is our Dashboard & Visualization Monitoring. Instead of various manually updated plant boards or paper distribution, we provide real time visualization tools for shop floor users, supervisors and management team. The days when data was already outdated when it was “delivered” are over.</p>	<p>Optimize business performance</p> <p>Connect people, information and business processes across networks</p> <p>Get closer to your customers</p> <p>Unlock the trove of valuable information</p> <p>All information, all people, one platform using SAP Business Objects</p> <p>Fast, flexible way to get started with basic KPIs</p> <p>Close the gap between strategy and execution</p> <p>Streamline planning and outpace competition</p> <p>Transform loose business processes into a performance-driven organization</p> <p>Increase enterprise transparency</p>
